### Victims of Crime

Q9 A very high proportion of offenders released from prison are convicted of another crime within a year. Which of the following do you think is the most likely explanation for why rates of reoffending are so high?

Base : All respondents

**Base**  
Sentences are too short and prison life is not hard enough to serve as a deterrent to committing further crimes  
Prison does not focus enough on rehabilitating offenders, through things like tackling drug addictions and preparing them for work

### Victims of Crime

**Q10** Reoffending rates are particularly high among those sentenced to six months or less in prison. Which of the following do you think would be the best way to tackle this problem:

Base : All respondents

**Base**  
 Introduce a presumption against short prison sentences, so those who would have been imprisoned for six months or less are given community punishments instead  
 Make prison life harder, to make it more of a deterrent to committing further crimes  
 Instead of giving short prison sentences, give longer prison sentences  
 None of the above - keep short sentences as they are

 A hard-headed, practical way of trying to reduce reoffending rates  
 A soft option that tries to make excuses for offenders rather than punishing them properly and deterring them from committing further crimes

**Q13 Below are two statements about the most effective approach to reducing reoffending. Please say which comes closest to your own view, even if neither describes exactly what you think:**

**Base : All respondents**

**Base**  
 The best way to reduce reoffending is to increase the deterrent effect of sentencing - by sending more offenders to prison, making prison life harder, making sentences longer, and making community punishments more demanding  
 The best way to reduce reoffending is to put more emphasis on rehabilitation - by treating addictions, helping offenders get qualifications and work experience, and preparing them for life in the community
